

Secvest GSM Module

Art.-Nr. FUM050000

-
- For voice and data connections
 - Plug connection for simple installation in the alarm panel
 - With integrated antenna and connection for another external antenna (AZ6310W)
 - Redundant transmission on PSTN failure
 - Ideal for buildings without a telephone connection (holiday homes etc.)
-

Offering a second method of transmitting alarm messages

The Secvest GSM module is an optional accessory for the Secvest wireless alarm system. It provides a second optional method of transmitting alarm messages by transmitting voice messages, monitoring station protocols and text messages via the mobile phone network. The GSM module is an especially practical choice in buildings without a telephone connection, as the analogue dialling device integrated in the Secvest wireless alarm system needs a functioning landline to operate.

Simple to use via SIM card

The GSM module is a small, powerful module that is easily inserted in the Secvest alarm panel (FUAA50000 / FUAA50010). To send voice messages, (monitoring station) protocols or text messages to a monitoring station or private telephone connection, the module only requires a SIM card to be inserted.

Secvest GSM Module

Art.-Nr. FUM050000

Technical Data

Communication	Standard SIM 1,8V / 3,0V
Connections	MMCX 50 Ohm
Height	14mm
Installation location	Motherboard (FUAA50000 / FUAA50010)
Length	40mm
Max. humidity	75%

Max. operating temperature	40°C
Min. operating temperature	-10°C
Radio frequency	850/900/1800/1900 MHz
Transmission power	EGSM 850 Class4/2W, EGSM 900 Class4/2W, EGSM 1800 Class1/1W, EGSM 1900 Class1/1W
Width	63mm
